Guidelines for the Final-Year Project Video Presentation

Prepare a **7–10-minute video** that clearly explains your project, demonstrates its working, and presents evidence of its outcomes.

Section	Suggested duration	What to present
Introduction	30 seconds	Project title, team members, department, and guide
Problem statement and objectives	1 minute	The problem, its importance, and measurable objectives
Related work and research gap	1 minute	Relevant existing approaches, their limitations, and the gap addressed
Methodology and architecture	1½ minutes	Proposed approach, workflow, architecture, and reasons for key design choices
Functional modules and dataset	1 minute	Main modules, their responsibilities, and dataset source, size, and preprocessing
Working demonstration	2 minutes	Show the application or prototype using a representative input and explain its output
Results and analysis	1½ minutes	Evaluation metrics, baseline comparison, main findings, and limitations
Conclusion and future work	30 seconds	Achievements against objectives and feasible improvements

Presentation expectations

- **Explain in your own words.** Use the poster as visual support; avoid reading paragraphs directly.
- **Demonstrate the actual project.** Keep screen text readable and explain what each demonstrated feature achieves.
- **Support claims with evidence.** Present measured results and acknowledge incomplete features or limitations. Clearly label simulated outputs.
- **Credit sources.** Cite research papers, datasets, external code, and other materials used.

Recording and submission

- Record in a quiet place with clear audio, adequate lighting, and a stable camera at eye level.
- Use a clean background and professional attire. Include a brief on-camera introduction.
- Prefer landscape orientation and at least **720p** resolution. Keep diagrams, charts, and captions readable.
- Rehearse and check the duration. Speak at a steady pace and use clear transitions between presenters.
- Submit in **MP4 format**. Name the file consistently, for example: `Batch_ID_Video.mp4`.
- Watch the complete video before submitting to check audio, screen visibility, playback, and the **7–10-minute duration**.
